Sumalee Rodolph

(404) 369-6535 | sumalee@rodolph.us | rodolph.us | Fort Worth, TX

EDUCATION

Texas Christian University — Fort Worth, TX
Davis College of Science & Engineering – Bachelor of Science, Data Science — May 2026
Dean's Honor List, College of Science & Engineering (Spring 2025, Fall 2025) — GPA: 3.61

EXPERIENCE

One Source Partners, LLC — Tampa, FL / Remote
AI & Data Scientist — May 2025 – Present

- Developed client-specific scoring models in Python to support early-stage evaluation of technology startups across 8 venture capital engagements, assessing viability as turnaround candidates.
- Analyzed and transformed a 1.2 million-record SQL database to deliver a ranked customer prioritization output for a municipal beta deployment.
- Integrated internal and external platform APIs to standardize customer acquisition and retention data across hundreds of consumer datasets.
- Implemented rule-based scoring logic and feature enrichment across 1.2 million records using external demographic and behavioral attributes, improving targeting accuracy by 14%.

Mathematics Tutor — Remote
Varsity Tutors (Independent Contractor) — May 2025 – Present

- Tutored high school and university students in Calculus, Precalculus, and Advanced Algebra.
- Adapted explanations and practice material to students' skill gaps across multiple levels of coursework.
- Built a custom retrieval system to automate individualized lesson planning and generate targeted practice from student-provided examples.

PROJECTS

Brazos Safety Systems — 3D Flight & Weather Visualization — Fort Worth, TX
JavaScript, CesiumJS, geospatial data processing — August 2025 – Present

- Developed a 3D flight-and-weather visualization module for a real capstone partner's event analysis workflow, designed for handoff and integration into a larger safety system.
- Integrated flight paths with real weather data, built client-side parsing, syncing, and visualization.
- Improved robustness by handling noisy/missing points: detected outliers and applied local smoothing to maintain continuous motion; validated visualization logic against 20+ mock and real-world edge-cases.

Luden — Math Problem Retrieval System — Fort Worth, TX
Python, Flask, AST parsing/canonicalization — January 2026 – Present

- Built a retrieval tool returning structurally similar math problems across a 1,400+ problem database, reducing manual lesson planning overhead.
- Implemented deterministic AST canonicalization to normalize expressions by stripping numeric values.
- Prototyped semantic matching approaches using LLM integration and vector database search.
- Implemented OCR-based image processing to extract math problems from user-uploaded images.

RELEVANT COURSEWORK

Predictive Modeling, Machine Learning, Deep Learning, Artificial Intelligence, Software Engineering, Python for Data Analytics, Analysis of Algorithms, Data Structures, Database Systems, Linear Algebra

SKILLS

Languages: Python, R, JavaScript, SQL, HTML, Java, C/C++
Libraries/Frameworks: pandas, NumPy, scikit-learn, PyTorch, statsmodels, Matplotlib, Flask, ChromaDB, pix2tex
Tools: Git/GitHub, VS Code, Google Colab, Jupyter Notebook, Linux/Unix
