Sumalee Rodolph

(404) 369-6535 | sumalee@rodolph.us | rodolph.us | Fort Worth, TX

EDUCATION

Texas Christian University — Fort Worth, TX
Davis College of Science & Engineering – Bachelor of Science, Data Science — May 2026
Dean's Honor List, College of Science & Engineering (Spring 2025, Fall 2025) — GPA: 3.61

EXPERIENCE

One Source Partners, LLC — Tampa, FL / Remote
AI & Data Scientist — May 2025 – Present

- Built client-specific scoring models to support initial due diligence across 8 venture capital clients, helping evaluate whether portfolio technology startups were viable turnaround candidates.
- Leveraged a 1.2 million-record database to deliver a ranked customer acquisition scoring model supporting ROI-driven segmentation, currently used by the City of Baltimore in a beta deployment.
- Integrated internal and external platform APIs to standardize customer acquisition and retention data across hundreds of consumer datasets.
- Implemented value-based scoring algorithms using rule and logic-tree factors, enriching 1.2 million records with external demographic attributes, increasing targeting accuracy by 14%.

Mathematics Tutor — Remote
Varsity Tutors (Independent Contractor) — May 2025 – Present

- Tutoring high school and university students in Calculus, Precalculus and Advanced Algebra.
- Providing assignment support and concept review tailored to different learning styles; subsequently developed the Luden retrieval system in January 2026 to automate and individualize lesson planning.

PROJECTS

Brazos Safety Systems — 3D Flight & Weather Visualization — Fort Worth, TX
JavaScript, CesiumJS, geospatial data processing — August 2025 – Present

- Developing a 3D flight-and-weather visualization module for a real capstone partner's event analysis workflow, designed for handoff and integration into a larger safety system.
- Integrated flight paths with METAR weather; executed client-side parsing, syncing, and visualization.
- Improved robustness by handling noisy/missing points: detected outliers and applied local smoothing to maintain continuous motion; validated visualization logic against 20+ mock and real-world edge-cases.
- Maintained version control across personal and shared remote repositories; executed consistent fetch and push workflows to synchronize data processing updates to the main codebase.

Luden — Math Problem Retrieval System — Fort Worth, TX
Python, Flask, AST parsing/canonicalization — January 2026 – Present

- Built a retrieval tool returning structurally similar math problems for tailored practice and repetition.
- Implemented deterministic AST canonicalization to normalize expressions by stripping numeric values.
- Supports LaTeX and plaintext inputs; cleaned, parsed and indexed a database of 1,400+ problems.
- Explored LLM integration and vector database retrieval workflows for semantic matching approaches.
- Implemented OCR-based image processing to extract math problems from user-uploaded images.

RELEVANT COURSEWORK

Predictive Modeling, Machine Learning, Deep Learning, Artificial Intelligence, Software Engineering, Python for Data Analytics, Analysis of Algorithms, Data Structures, Database Systems, Linear Algebra

SKILLS

Languages: Python, R, JavaScript, SQL, HTML, Java
Libraries/Frameworks: pandas, NumPy, scikit-learn, PyTorch, statsmodels, Matplotlib, Flask, ChromaDB, pix2tex
Tools: Git/GitHub, VS Code, Google Colab, Jupyter Notebook, Linux/Unix
